Nidec confirms ransomware attack leaked company data online

News By [Sead Fadilpašić](#) published 21 October 2024

After negotiations broke down, hackers leaked the stolen information on the dark web

The threat actors that breached Nidec Corporation earlier in 2024 leaked the data they stole in the attack on the dark web, the company has confirmed.

In its announcement, the company explained a threat actor stole valid VPN account information from a Nidec employee, and used it to access a server holding sensitive information.

It is important to note here that this was not a full-blown [ransomware](#) attack - no systems were encrypted during the attack. Instead, the threat actor just stole as many files as they could, and bolted.

Nidec Corporation is a Japanese multinational company specializing in electric motor technology, producing a wide range of motors for applications such as automotive, industrial, and home appliances.

In early June 2024, one of its subsidiaries - Nidec Precision - suffered a cyberattack.

Nidec Precision focuses on the design and manufacturing of precision components, particularly in the areas of robotics, electronics, and industrial automation. This company is based in Vietnam.

Among the information stolen in the attack are 50,694 files, including internal documents, letters from business partners, documents related to green procurement, labor safety and health policies, business documents (purchase orders, invoices, receipts), contracts, and more.
